## ZEPPELIN SYSTEMS INSPECTION SERVICE.

Functioning smoothly without downtimes.

Our inspection service ensures perfectly functioning equipment and trouble-free operation of your silos, mixers and components. In addition, we are happy to support you in optimizing your processes in order to produce even more efficiently.

Optimum performance mixers and silos.

Regular on-site inspections through Zeppelin Systems Service ensure your silos' and mixer functionality.

We check

- possible weak points to avoid failure or follow-up damages
- the safety of the equipment according to plant safety ordinances and occupational health and safety guidelines
- the potential for improved efficiency of the silos (hazard minimization, optimized processes)

Once work is completed, you will receive an inspection report allowing you to schedule any necessary measures.

SERVICE**

## ZEPPELIN SYSTEMS REPAIR SERVICE.

Like new again: the repair service for mixers and components.

If mixers or components are damaged or severely worn by abrasive bulk materials, repair is unavoidable. Our repair service returns them to like-new condition. We usually repair at one of our locations\* or, if possible, on-site at the plant.

This is in it for you:

- Repairs according to manufacturer specifications
- Use of special machinery and test benches
- Full check after repair, installation and recommissioning
- Warranty on all repair work performed
- Protocol of the repair work performed

High-quality and economical:  
Rebuilding and replacement.

When mixers and mixing tools are severely damaged, we rebuild them. The parts are designed in 3D – after our experts carefully record the technical data on site – and precisely manufactured at our production site. Existing attachments can be reused wherever possible.

We achieve a significantly extended service life and even optimize the components during rebuilding by selecting materials to best fit the product.

Sustainable: Wear protection for mixing tools.

Surface wear changes the geometry of mixing tools and thus their function. This will result in damage to the component – the mixer fails. We use build-up welding to give your worn mixing tools a new, resistant surface with up to 60 HRC surface hardness. Depending on the requirements, we use alloys based on nickel or tungsten fused carbide.

This lets you significantly reduce future wear and increase service life all while saving costs and raw materials.

# ZEPPELIN SYSTEMS SERVICE PACKAGES.

Tailor-made service for greater efficiency.

The Zeppelin Systems service packages ensure smooth operation at calculable costs. Our service professionals not only offer emergency assistance, but also help you during ongoing operations – by planning all routine maintenance work in advance and providing remote diagnostic support on request.

## Did you know?

**Our service packages offer better savings than individual products!**

## 1 BASIC PREVENTIVE INSPECTION

- Regular inspection of the systems and components as well as the electrical, pneumatic and hydraulic functions analogous to the Zeppelin checklist
- Detailed inspection report with repair or maintenance proposal
- Spare parts stocking recommendation

## 2 ADVANCED PREVENTIVE MAINTENANCE

- Preventive replacement of components with original Zeppelin spare parts
- Maintenance according to Zeppelin operating and maintenance instructions to increase safety for personnel, machinery and equipment
- Longer service life and reduced risk of failure

## 3 PREMIUM THE CUSTOM-TAILORED SERVICE PACKAGE

- After analyzing your needs, for example: process check, optimization of weighing scale tare, technical review / assistance, individual training packages, spare parts consulting, etc.
- More options upon consultation

# ZEPPELIN SYSTEMS 360° SERVICE.

Always by your side.

Zeppelin offers service with genuine added value. Because we supply turnkey plants as well as complete systems, mixers, silos and components – and are there by your side during the implementation of your project. This applies to new plant construction, as well as modernization projects. In this way, we ensure professional support and a smooth project flow. Tailored to your individual requirements.

Choose from tried and tested modules for all activities on your project. You can book the modules on a daily basis or as a package. We will be happy to put together optimally designed service solutions for your plant.

Getting where you need to be faster:  
Your benefits at a glance

- **No hassles with incomplete deliveries:**  
We check each packaging unit
- **Optimum project coordination:**  
We know exactly how to put your plant together
- **Security through professional competence:**  
No one knows our facilities better than we do
- **Accelerated workflow:**  
We work as a team
- **Assured start of production:**  
We guarantee resilient deadlines through clear planning
- **Optimal production output/performance:**  
We provide for continuous support

The package for your project's success
