## **SGE Plant Engineering Environmental Policy**

Environmental management is a fixed component of the strategic alignment of Zeppelin Systems GmbH and its subsidiaries. Our environmental policy is based on the requirements of Zeppelin GmbH.

As well as the Zeppelin GmbH we strive to improve our performance and economic success among our competitors, whilst ensuring that our actions are geared toward sustainability.

At Zeppelin, sustainability means making a long-term genuine contribution to the environment and society on the strength of our culture as a company that is fit for the future.

Within Zeppelin Systems GmbH and its subsidiaries we practice our understanding of sustainability. By doing so, we aim to increase our appeal to employees and customers, strengthen our brand, and advance our market position.

Zeppelin Systems GmbH and its subsidiaries therefore commits to an environmental and energy policy that protects the climate, environment, and health, based on the following objectives and actions.

Objectives:

- Maintenance and further development of an energy management systems in accordance with DIN EN ISO 50001. The handbook, which includes the energy policy and objectives, is available to all employees in Z NET.
- Reduce harmful greenhouse gas emissions
- Reduce the waste volume and promote reuse
- Use environmentally-friendly materials
- Use chemicals safely
- Promote regenerative energy sources to conserve limited resources and
- Minimize CO2 emissions
- Offer sustainable solutions for our customers

	<b>Environmental Policy</b>	Rev.: A Seite: 2 von 2

We do all the above based on legally specified stipulations, and also take the following actions that go beyond our statutory requirements:

- Give regular training to our employees in matters of the environment and energy, as well as raising their awareness in this area
- Ensure that our activities, products, production, and industrial and trade goods put as little strain on the environment as possible
- Prioritize energy-efficient and low-pollutant products, materials, and equipment in our procurement processes
- Reduce the handling of hazardous substances
- Avoid waste, separately record materials such as metal, wood, paper and dispose or reuse in an environmentally-friendly manner
- Use biologically biodegradable cleaning agents – minimize CO2 emissions
- Select suppliers based on ecological factors
- Achieve reduced energy consumption through targeted systems refurbishment; use energy-efficient technologies and comply with cutting-edge standards
- Save tap water and avoid waste water, by using water treatment plants in truck washing areas and washing stations
- Develop components and systems for the recycling industry

We review and assess our environmental policy and all the resulting steps toward environmental protection at regular intervals, adjusting them accordingly as framework conditions change.
